

IN THE SPECIFICATION

Please amend the specification on page 34, beginning at line 10, as follows:

“When it is determined in step S34 that the network prefix acquired in step S33 is not identical to the first network prefix of the terminal 1 stored in the hard disk drive 31, steps S35 through S37 are skipped.”

Please amend the specification on page 36, beginning at line 18, as follows:

“When the authentication data is checked, in step S43 the CPU 21 in the terminal 1 calculates the checksum of the TCP/UDP using the pseudo header (see FIG. 11), thereby checking the received packet for any error. If any error is contained in the received packet, the received packet is discarded. If no error is found, the received packet is captured.”
